

Section 02

Lab 01

Using instructions on <https://docs.docker.com/engine/installation/> install Docker on your operating system.

Lab 02

After completing lab 01, use Docker to pull an Ubuntu image from the repository and start a bash shell from that image.

Procedure

1. `docker run -i -t ubuntu sh -c /bin/bash`
You should be inside a bash prompt
2. Experiment with the shell by issuing common commands like `ls -l`
3. Terminate the shell by typing `exit`
